Projects

Literary Haven Library This is an e-library website

- Using this website, one can manage the library of an institution.
- This website is built using MongoDB, Express, node.js, React, firebases and other component libraries.
- It helps users with tasks like cataloguing books, issuing loans, accepting returns, and other library management activities.

Dreams Home This is a real estate website

- By using the website a user can find his dream home.
- Utilising various component libraries such as React, Node.js, Express, MongoDB, Firebase, and Tailwind CSS enhances the appeal and functionality of the website.

Trip Trekker Travel Destinations Website

- The website provides travellers with detailed insights into the current conditions of different places, helping them make informed decisions about their travel plans.
- This website is exceptionally creative and relevant due to its responsive design and the incorporation of various impressive component libraries such as Tailwind, React, and Firebase.
- By offering real-time updates on travel situations, the website empowers travellers to stay informed and adapt their plans accordingly for a smooth and hassle-free journey.
